Kalamazoo MI

### Installing Contractor

**Suburban Mech. Co.**

Kalamazoo, MI

### Construction Manager

**AVB Construction**

Portage, MI

### The RLD Project Team

Dave Shugars

Tim Dawson

Matt Overweg

## Challenge

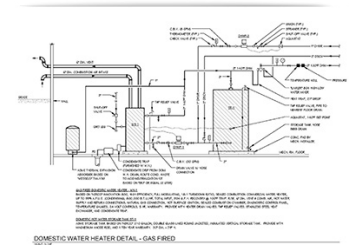

The new 85,000 square foot Gull Road Criminal Justice Facility (GRCJF) in Kalamazoo, MI, was completed in January 2016. The three-story building features courtrooms and court clerk, county prosecutor and FOC offices, as well as judge's chambers and holding rooms. It was a challenge to provide a domestic water heating system capable of responding to the varying demands, and required a capable system that could also provide energy-efficient operation.

## Why R.L. Deppmann?

Tower Pinkster judged that partnering with AERCO and RLD would provide the best solution for the new court building. Using **products and service solutions provided by Deppmann**, the County is enjoying better ROI and higher operating efficiency with their **domestic water heating system**.

## Solution

Having provided **AERCO boilers and water heaters** on previous county projects, the owner was convinced that AERCO was the perfect fit for the new courthouse. The Innovation water heaters provided high efficiency and the ability to deliver the right amount of hot water as loads change. The footprint of the **Innovation Water Heater** (which can be tankless) coupled with a smaller storage tank was a huge benefit on this job.

"I was very pleased with Deppmann's customer service and their willingness to help assist the installation. They were very quick to respond to questions, emails, phone calls and technical assistance. The equipment is working as designed."  
- Jordan Wilcox, RW LaPine
